No es la mejor opción para ti

Ingeniero de software front-end

Analista de negocios

Diseñador UX/UI

Ingeniero de DevOps

Ingeniero de análisis de datos

Ingeniero de software de datos

Científico de datos

## Ingeniero de soporte

Los especialistas en servicios de soporte son el primer punto de contacto para la asistencia técnica, responsables de resolver problemas básicos, escalar problemas complejos y garantizar una comunicación efectiva con los usuarios.

### Sus principales responsabilidades incluyen:

- Registrar, clasificar y priorizar incidentes, así como monitorear su progreso.
- Solución de problemas comunes y escalamiento de los más complejos a equipos de soporte de nivel superior cuando sea necesario
- Mantener a los usuarios informados sobre el estado de sus solicitudes hasta que se resuelvan

Expertos en herramientas de gestión de servicios de TI y diversos sistemas de software y hardware, mejoran la eficiencia del servicio al garantizar el cumplimiento oportuno de las solicitudes y el cierre de incidentes.

### Rasgos personales que te ayudarán a tener éxito:

- Perseverancia y persistencia
- Habilidades de comunicación y persuasión

### Elige esta dirección si:

- Prosperar al enfrentar desafíos técnicos y encontrar soluciones.

- Tenga un buen ojo para los detalles y un enfoque metódico en su trabajo.
- Nos apasiona ayudar a los demás y brindar apoyo de primer nivel.

## Retrato psicológico

Encuentra tu tipo psicológico que determina cómo percibes y reaccionas al mundo.

### Rasgos de carácter

You find it difficult to build relationships and prefer not to share your experiences with other people. A skeptic with a tendency toward synthetic thinking, you analyze and draw conclusions with mathematical precision in every situation that does not concern emotions and feelings. Feelings are your weak point, and it is difficult for you to express your emotions and to accept the emotionality of others. You are not indifferent, you just think everything through carefully and thoroughly, and there is simply not enough time to indulge in emotions. You are easily offended by remarks addressed to you, but you may nevertheless be harsh in your comments to others, sometimes hurting their feelings intentionally. You can concentrate on a single business or issue for an extended period of time, approaching it carefully and responsibly. You act according to accepted norms, rules, and standards, trying not to go beyond the "framework" they provide. You are productive alone or in a small group of familiar people. Remote work is not a challenge for you, but a pleasure. Your strength is anything that can be calculated mathematically or logically, as well as matters that do not require long communication. Negative qualities include: criticality, skepticism, possible social phobia, secrecy. You have difficulty changing your mind, and remember insults or slights for a long time.

Your  
main  
psychotype **23%**  
reserved

Your  
secondary  
psychotype **20%**  
conservative

You are good at catching the flow. Not everyone is able to concentrate as well on an activity as you are. This applies not only to work, but also outside working hours. At work, you are fully capable of immersing yourself in tasks.

### Specialties that are right for you

Good options for you: specialties that require not only analysis, but also synthesis; IT specialists (coders); robotics; designers. Remote work, work with a minimum of social contact, or projects in familiar, established groups are suitable.

Hobbies involving minimal social contact or those that are carried out with a narrow, familiar circle of people are best for you. Collecting, creating models, science as a hobby, philosophy. Basically, forms of entertainment in which you can classify, analyze, and build a certain system.

### Your unconscious yearning

Maintaining your comfortable status quo by refusing to communicate with the “hostile” world.

### Your style of thinking

Cognitive style: formal-logical, rational.

### How you respond to stress

At the slightest danger, real or imagined, an unconscious desire arises to hide and withdraw into yourself, sharply reducing possible contacts. The world seems dangerous and hostile, and you feel that it is you who are in danger.

### Your secondary psychotype

You have a wonderful quality: you always, without fail, have a “Plan B.” You identify several options and possible scenarios for the development of events, and prepare for them. You are dubious about new ideas and changes in your environment. You prefer to know everything in advance, and to verify things down to the smallest detail in order to avoid your fears. You have a primary need for affection and a warm relationship. Your judgments are always reliable, practical. You enjoy doing work that would seem boring to others. You don’t find the routine and the familiar irritating. Moreover, you can easily analyze data, and see the beauty in sequences and rules that others don’t grasp as easily. You have a heightened sensitivity to what is happening around you, and become indecisive when changing surroundings. Unfortunately, your self-esteem is very variable. You find it difficult to identify your desires and, as a result, you try to control the situation or people in your environment. Negative qualities include: suspiciousness, sensitivity to inattention and the rudeness of others, and a gentle nature. You are trusting, polite, and you require praise and recognition from others.

# Psychological profile description

Learn more about your character traits and behavior patterns.

## Personality attributes

Profile (combination of profiles): reserved, conservative

Expressiveness: Low

Neuroticism: None

Leading tendencies: rigidity, anxiety

Response type: Rigidity (tenacity)

Conformity: Has own opinion

Self-assessment: Low self-esteem

## Interpersonal communication specifics

Attitude towards establishing relationships: Low

Propensity to accept relationships: Average

Leadership skills: Prefers to act individually, skeptical of leadership

Being a team player: High rate

Conflict: Non-confrontational

## Learn and work behaviour patterns

Adjustment to stress: High

Thinking style: Formal, logical, rational

Efficiency: Good performer

Self-organization: A tendency to self-organization

Loyalty: Can change jobs if a better offer is received

Initiative: Initiative needs to be developed

The best way to learn:

Inclined to synthesis, draws conclusions from the specific to the general, easily continues the logical chain. Orientation to solving practical problems, preferably related to practical applications. Has difficulty moving away from the established scheme or template, slowly adjusts to new things that do not fit into the scheme. Learning should be based on the gradual joining of the new to the habitual, as well as repetition

## Probability of strong psychological reactions

## Low probability of deviation from the norm

- Internal emotional state
- Internal conflict and emotional tension
- Difficulty with self-control
- Aggressive reaction to stress
- The risk of becoming cynical about life, others, and work
- Risk of psycho-emotional exhaustion
- Risk of a psycho-emotional outburst in a stressful situation
- Sustainable anxious state
- Sustainable low self-esteem
- Isolation, unwillingness to communicate with others
- Risk of hostility and becoming conflict
- Risk of depression
- Risk of professional burnout
